

Excella[®] Light

YKK
Little Parts. Big Difference.

Aluminium is one of the lightest metals in the world but it's also very strong and corrosion resistant, because its surface is always covered in an extremely thin and yet very strong layer of oxide film.

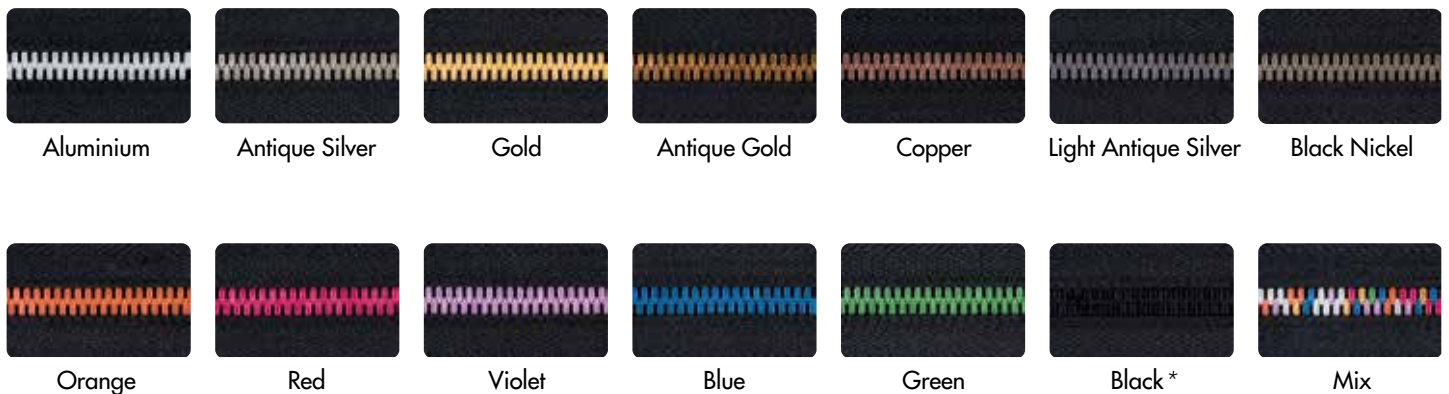

Excella® Light

It is a YKK's range of aluminium zippers created to offer high quality and easy gliding combined with lightness.

The elements of this line are made entirely of aluminium, which makes them suitable for knitwear, technical apparel and leather goods.

This special aluminium zipper is available in various finishes (Aluminium, Antique Silver, Gold, Antique Gold, Copper, Light Antique Silver, Black Nickel) and colours (Orange, Red, Violet, Blue, Green, Black).

The aluminium elements can be combined.

**Elements are available in BLK4YM, an even more resistant black surface*

- ✓ Aluminium elements for lightness
- ✓ Various metallic colours

Natulon® with recycled polyester tape

Excella® Light is available with Natulon® tape (chemically recycled polyester) too. The Natulon® series aims to reduce the use of petroleum derived materials, emission of GHG, and disposal of plastic waste by using recycled polyester yarn for the tape material.

Entirely manufactured in chemically recycled polyester, Natulon® tape comes from post-industrial textile waste and allows for further recycling, since the quality of the polyester obtained is that of a virgin product.
